2009

C O U N C I L O N V I R G I N I A ' S F U T U R E

COUNCIL ON VIRGINIA'S FUTURE

2009 Membership

CHAIR: The Honorable Timothy M. Kaine
Governor, Commonwealth of Virginia

VICE CHAIR: Mr. John O. (Dubby) Wynne
President & CEO (retired), Landmark Communications

GENERAL ASSEMBLY MEMBERS

The Honorable Ward L. Armstrong
Minority Leader, Virginia House of Delegates

The Honorable Charles J. Colgan
President Pro Tempore & Chairman, Finance
Committee, Senate of Virginia

The Honorable H. Morgan Griffith
Majority Leader, Virginia House of Delegates

The Honorable William J. Howell
Speaker of the House, Virginia House of Delegates

The Honorable Yvonne B. Miller
Member, Finance Committee, Senate of Virginia

The Honorable Thomas K. Norment, Jr.
Minority Leader, Senate of Virginia

The Honorable Lacey E. Putney
Chairman, Appropriations Committee
Virginia House of Delegates

The Honorable Richard L. Saslaw
Majority Leader, Senate of Virginia

CITIZEN & BUSINESS MEMBERS

The Honorable William D. Euille
Mayor, City of Alexandria

Mr. W. Heywood Fralin
CEO & President, Medical Facilities of America, Inc.

Mr. James F. McGuirk, II
President, AKLM Consulting, Inc.

Mr. Harris N. Miller
President & CEO, Career College Association

Dr. Edward G. Murphy
President & CEO, Carilion Health System

The Honorable Michael J. Schewel
Partner, McGuireWoods LLP

GOVERNOR'S CABINET MEMBERS

The Honorable Richard D. Brown
Secretary of Finance

The Honorable Thomas R. Morris
Secretary of Education

EXECUTIVE DIRECTOR: Jane N. Kusiak

THE VIRGINIA REPORT

Introduction

INTRODUCTION

This report was prepared pursuant to § 2.2-2686 of the Code of Virginia, which requires the Council on Virginia's Future to:

“develop and submit annually to the General Assembly and the Governor and publish to the public a balanced accountability scorecard containing an assessment of

- current service performance,
- productivity improvement, and
- progress against long-term objectives.

The balanced scorecard shall also contain other evaluative recommendations that will enhance the provision of state services and suggested measures to evaluate progress against long-term objectives.”

This report describes Virginia Performs, a performance leadership and accountability system, and presents a high-level assessment of Virginia's progress in areas that are important to its quality of life. It is issued annually to help track progress over time, highlight challenges, and provide analytic information for leadership and decision-making.

The main report consists of two sections: Assessing Virginia's Progress and 2010 Enhancements. Chapter I, Assessing Virginia's Progress, examines the progress being made toward long-term goals for both Virginia and its state government.

The chapter includes a brief discussion of educational attainment, which has been a topic of special emphasis for the Council in 2009. Chapter II, 2010 Enhancements, includes a brief introduction to the Council on Virginia's Future and a summary of the enhancements planned for 2010 concerning its four main focus areas: roadmap and special issues development, assessment, performance, and productivity improvement.

Questions or comments about this report may be directed to:

THE VIRGINIA REPORT

I. Assessing Progress

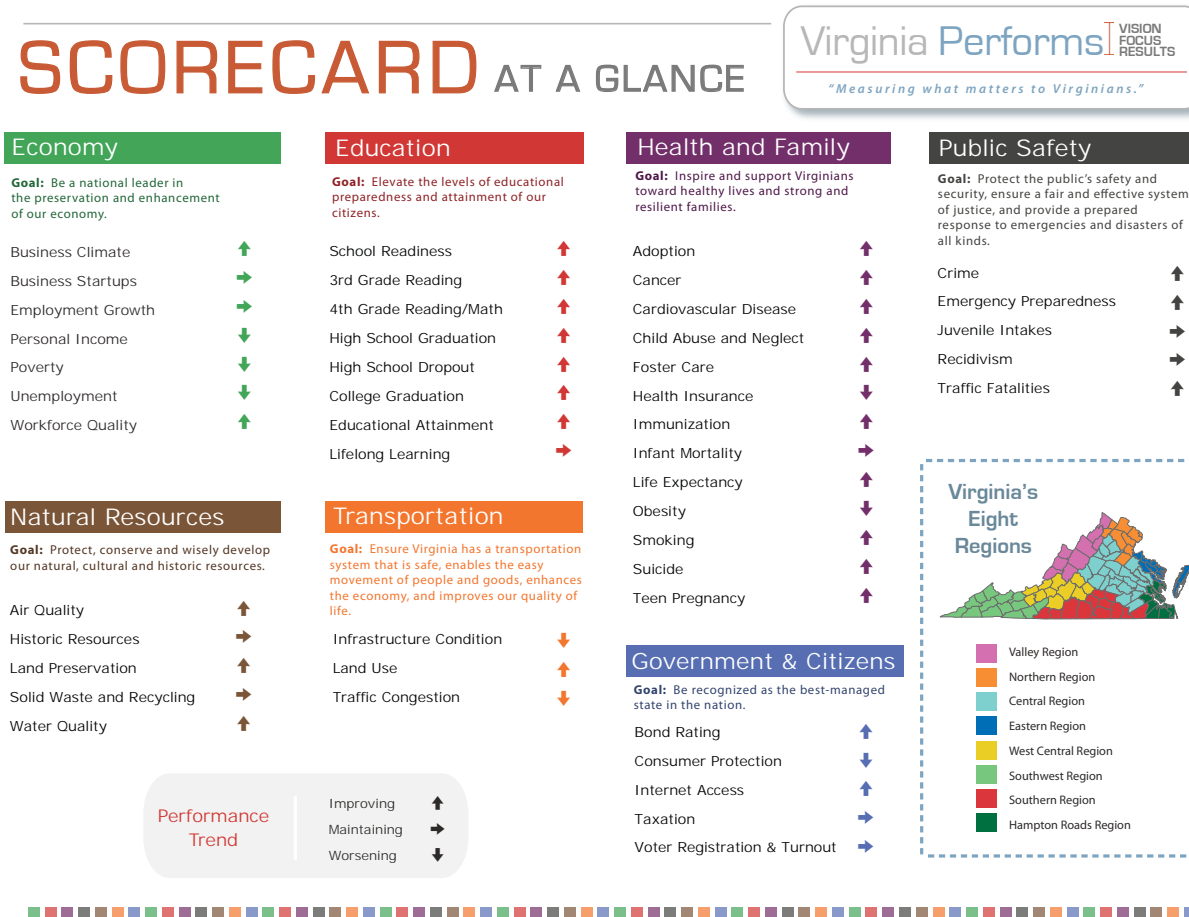

HOW IS VIRGINIA DOING?

The quality-of-life indicators presented in Virginia Performs help assess progress toward the seven high-level goals for Virginia that were established by the Council on Virginia's Future. Overall, the indicators paint a relatively positive picture for Virginia. Considering all 46 indicators, Virginia is

improving in 28, maintaining the status quo in 10, and losing ground in eight. Figure 1 is the "Scorecard at a Glance," which lists the societal, quality-of-life indicators arranged by the seven high-level goals established by the Council.

There were a number of changes in the Scorecard at a Glance over the past year, including declines in certain economic

Figure 1

I. ASSESSING VIRGINIA'S PROGRESS

INTRODUCTION

This chapter provides information that citizens and decision-makers can use to assess the Commonwealth's progress in several key areas. The analysis is based on and complements data presented on the Virginia Performs website, which provides a window into the performance leadership and accountability system established by the Council.

How is Virginia Doing?

This section includes a high-level scorecard based on the 46 quality-of-life indicators measured in Virginia Performs. These indicators provide a snapshot of how Virginia is doing on numerous quality-of-life issues (e.g., water quality, educational attainment). The analysis includes a brief discussion of a selected set of indicators that demonstrate that, while Virginia performs very well on many indicators, areas requiring improvement remain. A brief discussion of regional issues is also included.

Are We Getting Results on Our Highest Priorities?

This section presents information on the progress of state agencies toward important service priorities. It contains tables that align agency key objectives with societal indicators and show progress toward performance targets. This information was developed to improve outcomes for citizens by ensuring that state services are aligned with desired

outcomes and that agencies are achieving desired performance results.

Are Agencies Meeting Productivity Targets?

This section presents a summary of progress by agencies on productivity measures developed in 2008. The goal of the measures is to help agencies better understand the drivers of process efficiency and effectiveness and thus to improve their productivity targets. These measures are typically tied to a key process—one that produces one of the agency's most important products or services and that has a significant impact on customers, budgets, or performance outcomes.

indicators and positive progress on a number of key health and family, education, and natural resources outcomes.

Infant Mortality: Virginia's infant mortality rate has declined to its lowest level in history, with 6.7 deaths per 1,000 live births in 2008, down from 7.7 deaths in 2007. A state's infant mortality rate reflects the quality and availability of prenatal and birth care for mothers and children. While Virginia's rate has been trending down for years, it remains above the national average.

School Readiness: As measured by the PALS-K assessment in the fall, the percent of kindergarten students needing additional intervention under the early intervention reading initiative continues to improve, falling to 15 percent in 2008, down from 16 percent in 2007.

Third Grade Reading: Virginia students take the Standards of Learning (SOL) assessments for the first time in the third grade. Performance on the SOL third grade reading test continues to improve, reaching 86.8 percent for the 2008-2009 school year, up from 84.6 percent in the 2007-2008 school year.

Land Preservation: Virginia continues to make steady progress in protecting its valuable natural resources. In 2008, the Department of Conservation and Recreation estimates that more than 172,000 acres were preserved through outright purchases, easements, and other public-private vehicles and partnerships.

Despite this good news, Virginia continues in the grip of what is now the longest recession since the Great Depression, with adverse effects on several economic fronts. This dramatic downturn showed up most clearly in the following indicators:

Personal Income: The 2007-2008 collapse of financial markets had a significant impact on incomes in Virginia. Per capita personal income, adjusted for inflation, declined in 2008 to \$41,291 from \$41,727 in 2007, a drop of about one percent. However, Virginia still ranks eighth among the states in per capita personal income.

Unemployment: Virginia's unemployment rate, along with that of the nation, rose dramatically during 2008 and into 2009. However, Virginia's 2008 unemployment rate of 4.0 percent was significantly better than the national rate of 5.8 percent. Current data from the Virginia Employment Commission shows that Virginia's unemployment rate was 6.5 percent in August, compared to a 9.6 percent rate for the nation as a whole. Unemployment rates by locality range from a low of 4.1 percent in Arlington County to a high of 20.8 percent in Martinsville city.

Poverty: In 2007, Virginia had the tenth lowest poverty rate in the nation at 9.9 percent. The poverty rate increased from 9.6 percent in 2006, when Virginia's poverty rate was the sixth lowest in the nation. However, data released recently by the U.S. Census Bureau indicates that Virginia's poverty rate climbed to 10.2 percent in 2008.

Figure 2 below summarizes the current performance trends from the Scorecard at a Glance.

Figure 3 presents Virginia’s national ranking where comparable state data exists. For these 33 indicators, Virginia ranks in the top ten states for 12 indicators, ranks 11-20 among the states for nine indicators, ranks 21-30 for nine

indicators, and ranks below 30 in three indicators. Comparison data for state rankings are not available for all indicators.

Overall, the data describes a positive picture of how Virginia compares with other states, with certain challenges for the future. [More information is available on the Virginia Performs website (www.VaPerforms.virginia.gov), including

discussions of trends, factors that influence each indicator, and the state's role in effecting the outcomes measured by each indicator.]

FIGURE 4: Performance (% Improvement or Decline) of Key Indicators by State Ranking

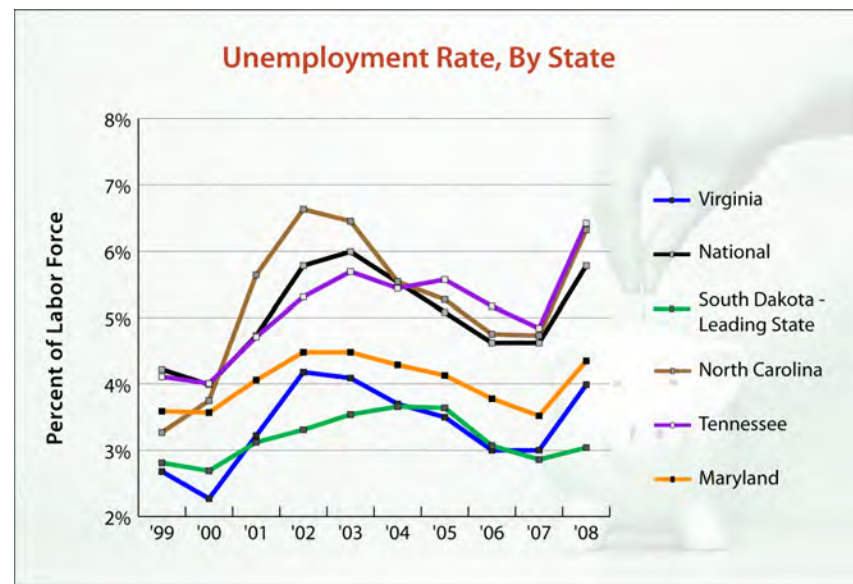

Figure 4 on page 7 presents another view of progress in Virginia for key societal indicators. The chart presents the percentage change in the value of an indicator against Virginia's most current ranking among the states for that indicator. A positive percentage means that the indicator is improving—for instance, the positive change portrayed for infant mortality means that the indicator improved because infant deaths per 1,000 live births fell by about five percent.

The chart shows that Virginia continued to improve in some areas where it is already relatively highly ranked: adult smoking, educational attainment, and fourth grade reading along with areas where it had not been highly ranked, including infant mortality and community college graduation rates. Infrastructure condition worsened, as did Virginia's performance on some more highly ranked indicators. Virginia's ranking for poverty fell from sixth to tenth lowest, for obesity from 18th to 20th lowest, and for infrastructure condition (deficient bridges) from 28th to 29th. The ranking improved for smoking (14th to 11th) and college graduation at community colleges (29th to 27th).

The remainder of this Assessment section provides a more detailed picture of Virginia's progress in certain core goal areas: economy, education, health and family, transportation, and public safety. The selected indicators illustrate a few of the strengths and challenges inherent in a relatively prosperous and diverse Virginia. Each included graph presents information on Virginia, the national average, the leading state for that indicator, and a set of neighboring states—Maryland, North Carolina, and Tennessee—to provide a relevant benchmark to help assess Virginia's progress.

Economy

Virginia, like the nation, continues to grapple with what is now being called by some the "Great Recession," the longest recession since the Great Depression. The 2007-2008 collapse of financial markets had a significant impact on employment and incomes in Virginia, although not as great as on the nation as a whole. According to the Virginia Employment Commission (VEC), Virginia appears to be upholding its track record of outperforming the nation by about 25 percent on several key indicators.

According to the VEC, Virginia's seasonally adjusted unemployment rate of 6.5 percent in August 2009 (down from 7.1 percent in May) compared favorably to the August national average of 9.6 percent. However, this is substantially above the Commonwealth's unemployment rate of 4.0

percent in 2008. The recession is also having a negative effect on personal income and poverty across the Commonwealth.

Poverty rates increased in Virginia in 2007 to 9.9 percent, roughly equivalent to the rate of the previous five years. However, data just released by the U.S. Census Bureau indicates that Virginia's poverty rate climbed to 10.2 percent in 2008. Given that inflation-adjusted per capita personal income declined in 2008 – an uncommon event – and that

unemployment remains high, it is likely that the poverty rate will continue to increase into 2010.

Education

In many respects, Virginia's K-16 education system and the educational attainment of its working age adults are the envy of many. Virginia's long-standing commitment to improving

educational outcomes is showing up in the performance of key education indicators.

- **School Readiness:** As measured by the PALS-K assessment in the fall, the percent of kindergarten students needing additional intervention under the early intervention reading initiative continues to improve, falling to 15 percent in 2008, down from 16 percent in 2007.
- **Third Grade Reading:** Virginia students take the Standards of Learning (SOL) assessments for the first time in the third grade. Performance on the SOL third grade reading test continues to improve, reaching 86.8 percent for the 2008-2009 school year, up from 84.6 percent in the 2007-2008 school year.
- **Fourth Grade Reading and Math:** Virginia students compare favorably with their counterparts across the United States in their performance on standardized tests and advanced coursework. The first consistent national assessment is conducted via the fourth grade National Assessment of Educational Progress (NAEP) test, often called the "nation's report card." In 2007, Virginia ranked sixth in reading and was tied with four other states for 14th on the math test, an improvement in the math ranking from 23rd in 2005.
- **High School Graduation:** Virginia recently implemented a new, more accurate measurement of high school completion called the On-time Cohort Graduation Rate. Virginia's 2008-09 graduation rate was 83.2 percent, up from 82.1 percent for the 2007-08 school year.

Indicator data on Virginia Performs presents a mixed picture of progress on educational attainment in Virginia. On the positive side, the Commonwealth's workforce boasts an impressively high percentage of skilled workers. In 2007,

Virginia ranked fourth in the nation for most master's degrees (9.8 percent), fourth for doctorates (1.5 percent), and fifth for the most professional degrees (2.4 percent) as a percentage of the adult population 25 and over. Overall, Virginia ranked seventh among the states in the percentage of its adult population 25 and older with a bachelor's degree or higher in 2007.

On the other hand, in 2007 Virginia had only the 28th highest percentage of its adult population with at least a high school education. There are also significant regional differences in educational attainment levels. The percentage of adults with less than a high school education was above 30 percent in the Southside and Southwest regions and above 20 percent in the Eastern, Valley, and West Central regions in 2000.

Despite continued progress in Virginia, there is widespread agreement that current levels of educational achievement are not sufficient to sustain the state's economic competitiveness and standard of living in an increasingly competitive world economy. Additional education or training beyond high school has become essential for ensuring individual success and regional prosperity.

While the Commonwealth competes effectively for global talent and imports many more workers with bachelor's degrees or better than it exports every year, Virginia will need

to generate more of its own exceptional talent base to support future growth. Unfortunately, it is one of 24 states where the younger adult cohort is less educated than an older generation of workers.

For instance, in 2007, 36.5 percent of adults aged 35 to 44 in Virginia had attained a bachelor's degree or higher; however, only 35.2 percent of adults 25 to 34 had attained at least a bachelor's degree. In addition, Virginia's rank among all states for the percentage of adults with an associate's degree or higher is declining for its younger age groups. Virginia's national rank for the percentage of adults with at least an associate's degree was eighth in 2007 for adults aged 45 to 64; 11th for adults aged 35 to 44; and 14th for adults aged 25 to 34 years.

Like the United States as a whole, Virginia is lagging behind a growing number of industrialized countries in the percent of younger adults getting a college degree. Over time this will mean that in both Virginia and the U.S. overall higher education attainment levels will lag behind a growing number of international competitors. Twenty years ago, America led the world in the educational achievement of its citizens. Since then, however, as shown in Figure 5, countries as diverse as Canada, Korea, Ireland, Japan and New Zealand have surged past the U.S. in educating their younger adults.

FIGURE 5: 2006 Adult Educational Attainment Rates by Age Cohort

	Adults with at Least an Associate Degree (per 100 Adults)		
	Age 45 to 54	Age 25 to 34	Percent Change in Cohort Attainment Rate
Canada	43.2	54.8	26.9%
Japan	39.3	54.1	37.7%
Korea	19.2	53.0	176.0%
New Zealand	38.1	43.6	14.4%
Ireland	24.0	42.2	75.8%
Virginia	42.9	41.6	-3.0%
United States	39.6	39.2	-1.0%

Source: Organization for Economic Cooperation and Development (OECD), *Education at a Glance 2008*. Virginia data from the National Center for Higher Education Management Systems (NCHEMS).

Health

Virginia is making progress on key indicators for child health.

Child Abuse and Neglect: With 3.5 substantiated cases of abuse per 1,000 children, Virginia continues to improve this indicator and maintain a better rate than the nation as a whole, with 10.6 substantiated cases per 1,000 children.

Teen Birth Rate: Although Virginia experienced a slight uptick in births among teenagers aged 15 to 19, the long-term trend shows much improvement overall for this indicator.

Infant Mortality: Virginia's infant mortality rate has declined to its lowest level in history, with 6.7 deaths per 1,000 live births in 2008, down from 7.7 deaths in 2007. A state's infant mortality rate reflects the quality and availability of prenatal and birth care for both mothers and children. While

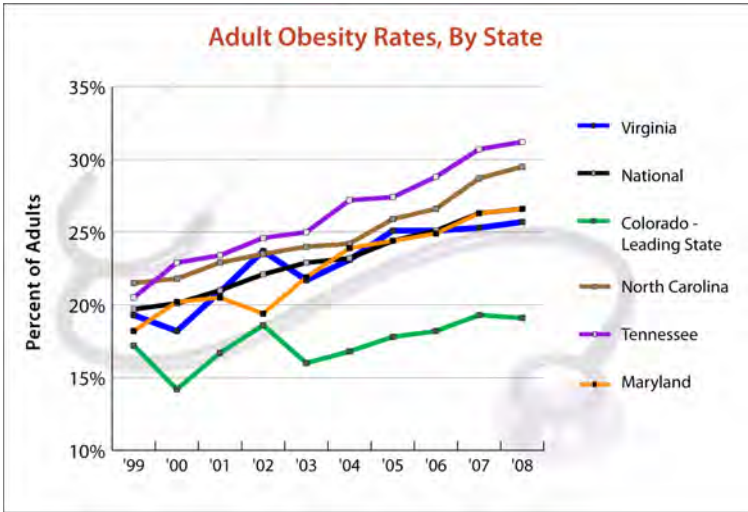

Virginia's rate has been trending down for years, it remains above the national average. Data comparing Virginia's rate to those of other states for 2008 is not yet available.

Heart disease remains the leading cause of death in the United States, and stroke is the third most common cause. And, while the overall cancer death rate declined during the 1990s, cancer remains the second leading cause of death. Obesity and smoking are considered two critical risk factors for these illnesses, which are placing growing strains on the nation's health care system.

After increasing rapidly until 2005, the growth rate of obesity in Virginia's adults has slowed considerably, rising from 25.1 percent in 2005 to 25.7 percent in 2008. This was below the

national average of 26.6 percent and gave Virginia the 20th lowest rate among the states. The data on smoking is even more positive, with a significant drop in 2008 to 16.4 percent

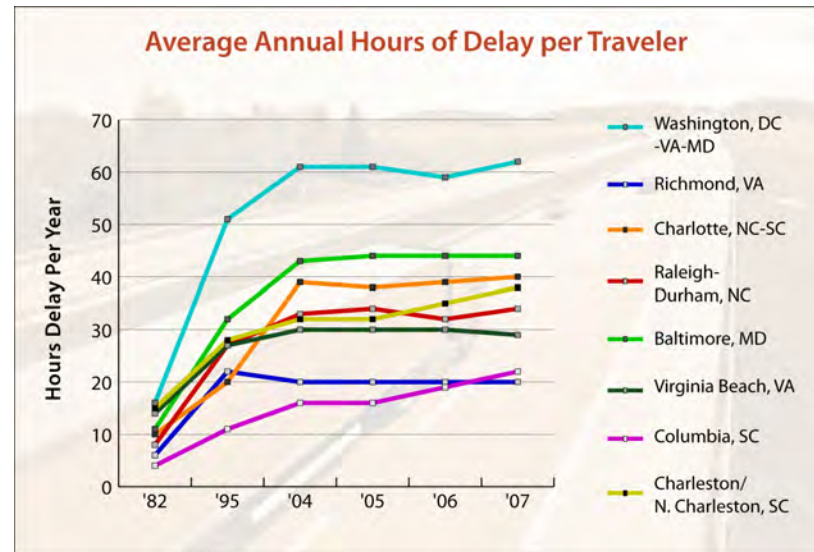

of adults, down from 18.5 percent in 2007. Virginia's smoking rate ranked 11th lowest among the states in 2008, an improvement from 14th in 2007.

Transportation

Traffic congestion presents more than a headache for commuters; it has a negative impact on the delivery of goods and services and on the general well-being of citizens. The Washington, DC metropolitan area is tied with San Francisco, CA and Atlanta, GA as having the nation's second highest rate of congestion. The Hampton Roads area also experiences high levels of congestion. In Virginia, the average commute time to work in 2007 was 26.8 minutes, eighth highest in the nation but a slight improvement from 2006, when Virginia was the sixth highest in the nation. While

higher than North Carolina (23.3 minutes) and Tennessee (23.8 minutes), this average commute time is slightly lower than Maryland's 31.1 minutes. The national average was 25.3 minutes.

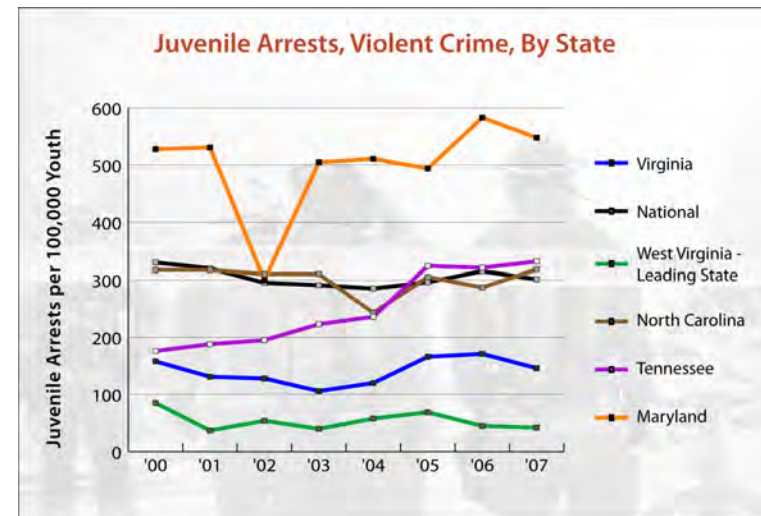

Maintaining Virginia’s transportation infrastructure appears to be a growing challenge. Infrastructure not properly maintained can lead to increased congestion and safety risks. In 2008, 26.0 percent of Virginia's bridges were functionally obsolete or structurally deficient, placing the state at 29th lowest in the nation for percent of deficient bridges. This was a slight increase from the 25.7 percent figure in 2007.

Public Safety

Virginia’s property crime rate per 100,000 people declined by about 20 percent between 1999 and 2007 and remained well below both the national average and rates in the neighboring states of Maryland, North Carolina, and Tennessee. Virginia’s violent crime rate was 270 per 100,000 people in 2007, down from 315 in 1999. Throughout this period, Virginia remained below the national average; Virginia’s violent crime rate gave

Virginia the 11th lowest rate in the nation in 2007 and property crime was the 12th lowest.

In addition, Virginia ranks well below the national average for juvenile intakes – incidents in which a juvenile is alleged to

have broken the law. In 2007 Virginia's juvenile arrest rate for property crimes was 784 per 100,000 population aged 10-17 the 6th lowest in the United States. The national average was 1,292. Virginia's juvenile arrest rate for violent crime in 2007 was 146 per 100,000 population aged 10-17 ranking the Commonwealth 14th lowest nationally. The U.S. average was 301 arrests for violent crime per 100,000 youths.

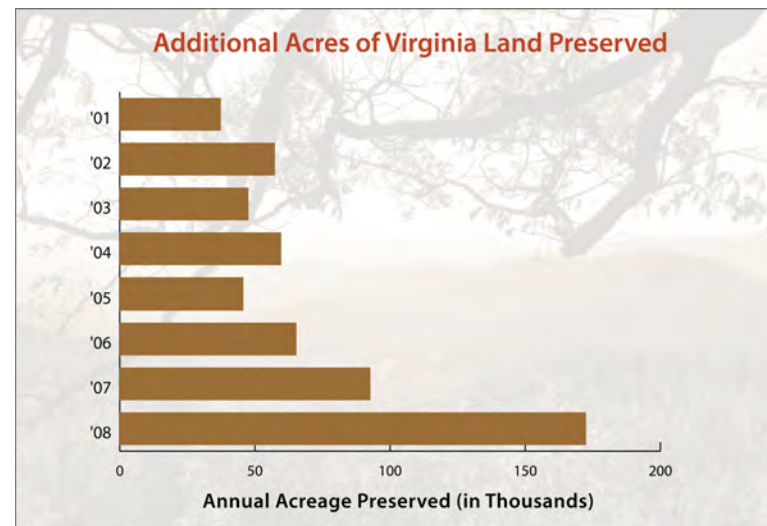

Virginia's 2007 traffic fatality rate of 13.3 fatalities per 100,000 population was lower than the national average of 13.6 and gave Virginia the 21st lowest fatality rate in the nation. This rate was also lower than two of its peers, North Carolina (18.5) and Tennessee (19.7), but higher than Maryland (10.9). More importantly, the actual number of traffic fatalities in Virginia declined from 935 in 2001 to 821 in 2008. On the negative side, alcohol-related deaths as a percent of total crash fatalities have increased slightly since 1999. In 1999, 34.9 percent of the crash fatalities involved alcohol, while in 2007, 38.9 percent involved alcohol.

Natural Resources

Virginia goal is to protect, conserve and wisely develop our natural, historic and cultural resources.

- Virginia's air quality is within federal limits for all pollutants except ozone; however, even that has significantly decreased since 1997.
- Since 2001, Virginia has been making a concerted effort to increase the amount of land kept free from development.
- The total amount of solid waste has grown in recent years, and recycling rates remain well below 50 percent for most Virginia regions.
- Virginia ranks first in the nation for historic district registrations.
- Although discharges of harmful substances into the Chesapeake Bay have been reduced, progress has been slow.

REGIONAL DATA

Virginia Performs contains a wealth of information on Virginia's diverse regions. Locality data is also included on

the website. Figure 6 summarizes performance trends for the key measures where regional trend data is available. Figure 7

provides a list of the localities within each region. Regional performance levels can differ markedly from the state average. Differences of the type found in Virginia are not unusual in states with growing urban and slower-growing or declining rural areas. Nevertheless, contrasts can be significant, and a few indicators are presented here to highlight the variations in outcomes across Virginia's regions.

Regional Economies

In several respects, Virginia's diversity is nowhere more apparent than in the economic arena. The gap between inflation-adjusted per capita personal income levels in Northern Virginia and most of the rest of the state is growing. The Northern region had the highest per capita personal income in 2007 at \$56,981, while the Central region had the second highest (\$39,719). At the other end of the spectrum, the Southside and Southwest regions had the lowest per

capita personal income at \$25,527 and \$26,264, respectively. Between 2000 and 2008 Virginia's per capita income grew at a rate of 1.1 percent, compared to the national average of 0.7 percent over the same period. Within Virginia, Hampton Roads had the fastest growth rate at 1.9 percent between 2000 and 2007.

Differences in income growth affect poverty levels. In 2007, the Southwest region had the highest percentage of families living below the poverty level (17.6 percent, up from 15.6 percent in 2003) of any region in the state, followed by the Southside (17.4 percent, up from 14.8 percent) and Eastern (13.7 percent, up from 13.2 percent) regions. The Northern Virginia rate was 5.3 percent.

Across the state, the unemployment rate varied in 2008 from a high of 7.2 percent in the Southside region to a low of 3.0 percent in the Northern region. The central tier of the state (Central and West Central regions) had rates between 4.2 percent and 4.3 percent. The Southwest region was second highest with 5.4 percent unemployment. In the last decade, the Southside and Southwest regions have routinely experienced higher rates of unemployment than other regions, largely due to the loss of manufacturing jobs and limited economic growth. All of Virginia's regions experienced growing unemployment rates in the first half of 2009.

Other Regional Indicators

Virginia students take the Standards of Learning (SOL) assessments for the first time in the third grade. Overall pass rates for the third grade reading assessment for the 2008-09 school year were at 86.8 percent. For the regions, in 2008-09 the Eastern and Valley regions had the lowest pass rates, at 78.4 and 84.7 percent respectively. The Southwest and Northern regions experienced the highest pass rates in 2008-09, at 88.2 percent.

With 3.5 substantiated cases of abuse per 1,000 children, Virginia continues to improve this indicator and maintain a better rate than the nation as a whole, which reported 10.6 substantiated cases per 1,000 children in 2008. For Virginia's regions, a sharp

decrease in abuse cases in Hampton Roads more than offset an increase in the Southwest region. The rates of child abuse and neglect are highest in the West Central (6.0 per 1,000)

and Southwest (8.6) regions. The Northern region has maintained the lowest rate of child maltreatment at 1.7 per 1,000 children.

While there is improvement across all regions, there remain significant variations in regional cardiovascular death rates within Virginia. The Northern, Central, and Valley regions had the lowest cardiovascular death rates, with 185, 241 and 245 deaths per 100,000 people respectively in 2006. Southside had the highest rate in 2007, with 317 deaths per 100,000 people.

The rate of pregnancy among teenagers 15 to 19 years old continues to decline in Virginia and for the nation as a whole. Within Virginia, teen pregnancy has generally been decreasing, with every region except the Southwest having a lower rate in 2007 than it did in 2000. 2007 regional data from the Virginia Department of Health shows that the

Eastern (68.7) and Hampton Roads (64.1) regions had the highest teen pregnancy rates per 1,000 females between the ages of 15 and 19, while the Northern (38.1) and Valley (45.5) regions had the lowest rates.

Virginia's juvenile intake rate — intakes are incidents in which a juvenile is alleged to have broken the law — has decreased over the last several years. The lowest rate in 2008 was in the Northern region (53.4), followed by the Eastern region, with 69.6 intakes per 1,000 youth ages 10 to 17. The highest rate was in the West Central region, with 90.8 intakes per 1,000 youth.

Virginia's traffic fatality rate declined in 2008. However, significant regional differences in fatality rates are apparent from the graph above. A wide range of reasons accounts for these differences, including average speeds, the safety of the roads themselves, attitudes toward drinking and driving, and the prevalence of aggressive driving.

ARE WE GETTING RESULTS ON OUR HIGHEST PRIORITIES?

Introduction

This section presents a set of tables that align state agency key performance measures with societal indicators and shows progress against targets for key objectives. These key measures are arranged by Council goal. This information was developed to improve results for citizens by ensuring that state services are aligned with desired outcomes and are achieving desired performance results. Assessments of progress were made using data available in October 2009.

Performance Data

Performance data is presented by long-term goal (economy, education, etc.) and societal indicator (personal income, high school graduation rate, etc.). Metrics reported here are limited to agency key measures. Agencies also report performance data for each budget service area that has been defined through the strategic planning and budgeting processes. This more comprehensive performance data set, along with information on productivity and administrative measures, is available on Virginia Performs (VaPerforms.virginia.gov).

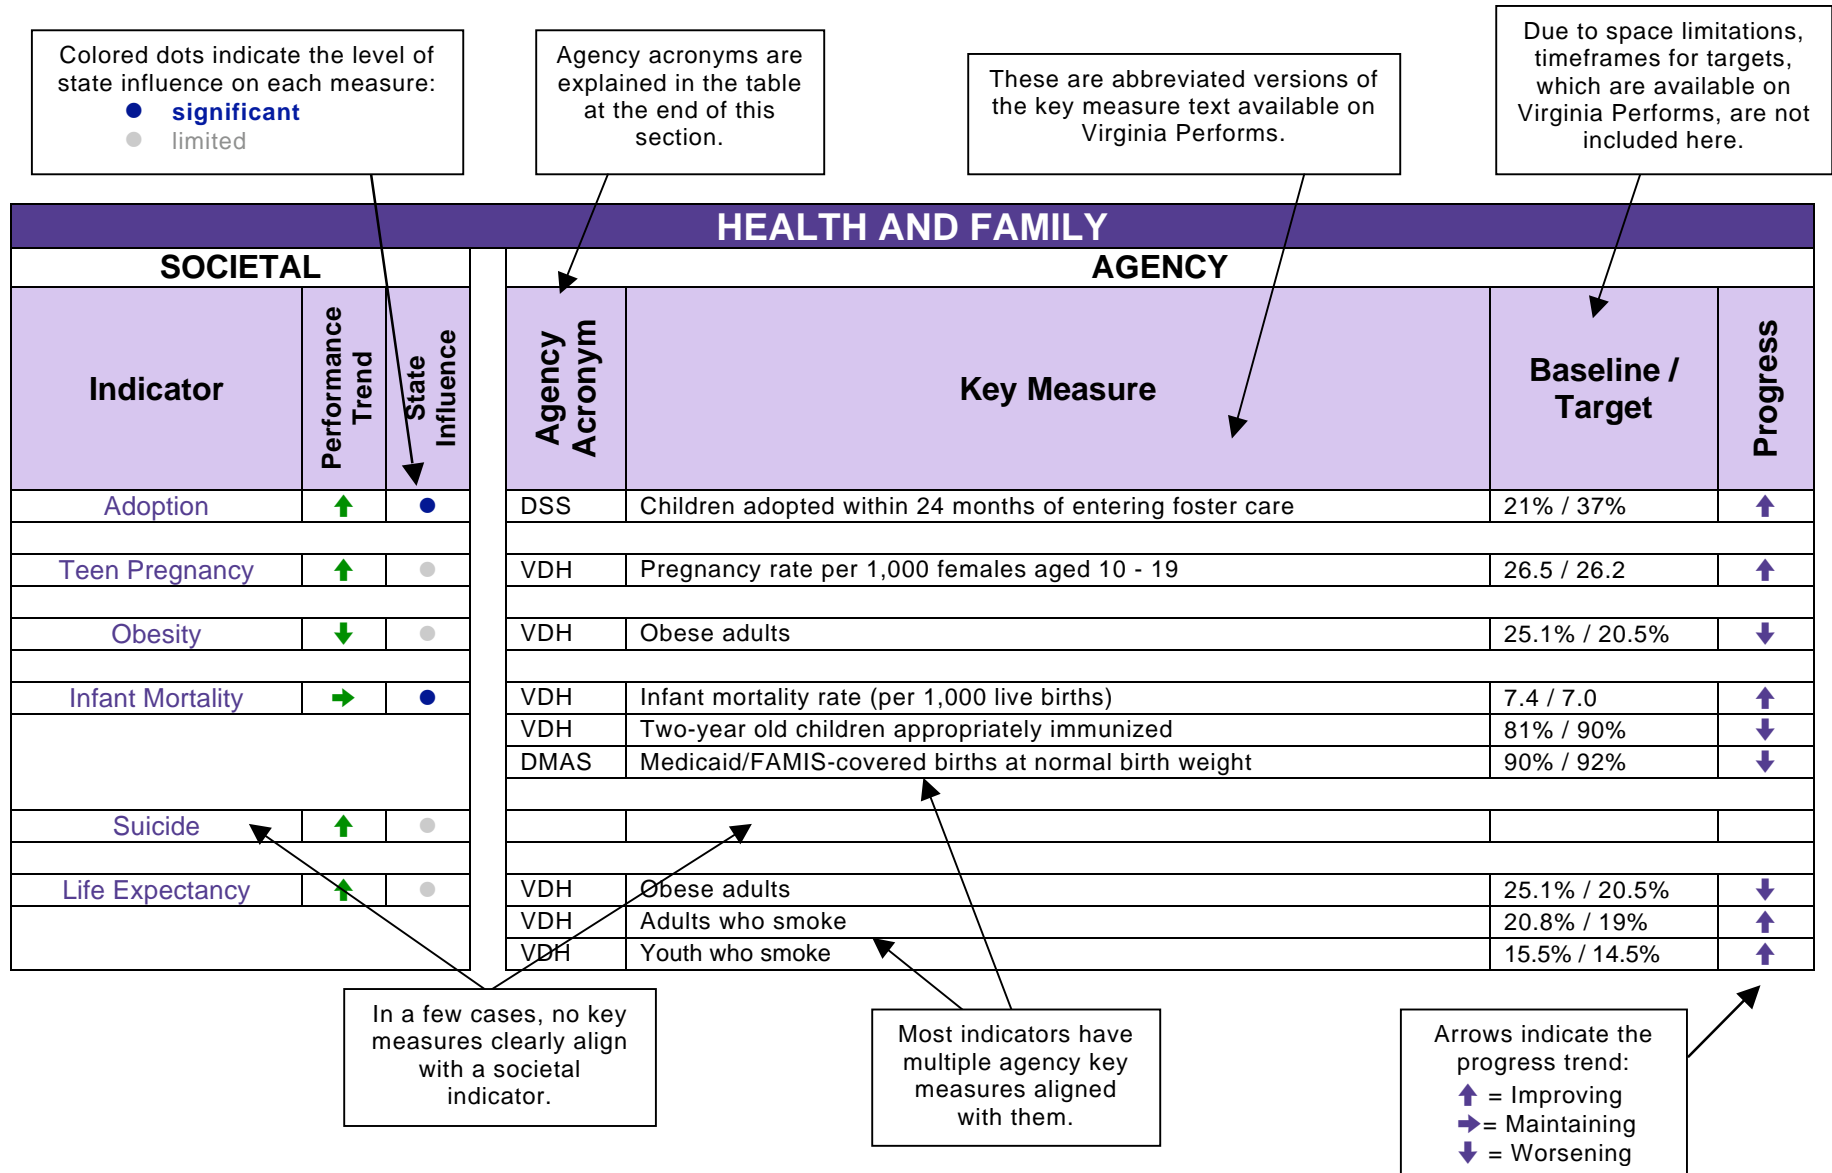

In reviewing the tables, please note that some key measures align with more than one societal indicator. For instance, the Virginia Department of Health's key objective to reduce smoking rates directly impacts not only the smoking societal indicator, but also rates of cancer, cardiovascular disease, and

overall life expectancy and is therefore repeated for each of these indicators. In addition, some indicators have few or no agency key metrics associated with them; in some cases, the state's role in influencing the indicator is limited, and in others, the relevant state measures are reported at the budget service area level. Refinement will continue to ensure that measures exist for the most important desired outcomes and that their performance data is available to help with policy and budget decisions.

Indicator-Measures Alignment Tables

Figure 8 on the following page shows a sample indicator-measures alignment table from Health and Family, with key sections labeled. The left-hand side of each table lists the societal indicators for each goal. On page 41 there is a helpful table explaining the agency acronyms used. Finally, it is important to note that data is not available for all measures.

Figure 8: Example of Agency Key Measures to Societal Indicators Alignment

AGENCY KEY MEASURES (October 2009)

ECONOMY						
SOCIETAL			AGENCY			
Indicator	Performance Trend	State Influence	Agency Acronym	Key Measure	Baseline / Target	Progress
Personal Income	↓	●	VEC	Wagner-Peyser Entered-Employment Rate	66% / 71%	↓
			VEDP	Business investment through VEDP assistance	\$3.5B / \$2.6B	↑
			DHCD	Households spending more than 30 percent of income on housing	31% / 30%	↓
			DHCD	Localities with greater than 1.5 times the state unemployment rate	24% / 20%	↑
			VDACS	Virginia's tuberculosis-, brucellosis-, and pseudorabies-free rate	100% / 100%	→
			VDACS	Value of products sold with help from VDACS	\$2.3B / \$2.34B	↓
Poverty Rate	↓	●	DHCD	Households without complete indoor plumbing facilities	13,355 / 10,000	↓
Unemployment	↓	●	VEC	Wagner-Peyser Entered-Employment Rate	66% / 71%	↓
			DBA	Companies assisted by Workforce Services Jobs Investment Program	497 / 532	↓
			DBA	Employees receiving training via Workforce Services	13,252 / 15,658	↑
			DHCD	Localities with greater than 1.5 times the state unemployment rate	24% / 20%	↑
			DSS	TANF participants employed six months after program exit	58% / 65%	↓
			VEDP	New jobs created through VEDP assistance	27,046 / 17,000	↓
			VPA	Jobs provided by port-related businesses	165K / 250K	-
Employment Growth	→	●	CIT	State ranking for venture capital investments	12 / 11	↑
			DBA	Companies assisted by Workforce Services Jobs Investment Program	497 / 532	↓
			DBA	Employees receiving training via Workforce Services	13,252 / 15,658	↑
			DHCD	Localities with greater than 1.5 times the state unemployment rate	24% / 20%	↑
			VPA	Jobs provided by port-related businesses	165K / 250K	-
			VPA	Containers handled through the Port of Virginia (millions of twenty-foot equivalent units)	2.14 / 2.17	↓

ECONOMY

ARE AGENCIES MEETING PRODUCTIVITY TARGETS?

Introduction

The tables below present agency productivity measures developed in 2008. Agencies will develop multiple measures in the future, but the emphasis to date has been on developing one measure well. Agencies began to record productivity data in the first quarter of calendar year 2009. The data here are from the Virginia Performs website as of October 2009.

Productivity Measures

Productivity measures are tied to a key process—one that produces the agency’s most important service or product and has a significant impact on customers, budgets, or performance outcomes. Where possible, the measures are stated in terms of cost per unit. Examples include the cost to renew a vehicle registration and the cost to process a Medicaid application. In reviewing the tables, please note that an ‘N/A’ or ‘-’ is recorded where data are still being developed.

Brief descriptions of the column headings follow. Units vary from measure to measure and are specified for each measure.

Productivity Measure: This description is a condensed version of the text that is available through the state agency reporting section of the Virginia Performs website and is not intended to be fully explanatory.

Base: A current or recent starting point from which to measure the productivity change.

Target: A measurable performance goal established by the agency.

Percent Change: The percent change from the Base to the Target. For most cost- and some time-based items the desired percent change would be negative. However, in some cases say, the number of items produced in an hour—the desired change would be positive. It should be noted that given various inflationary pressures (for instance, from rising health care costs for staff-intensive activities), keeping a value constant over time (i.e., 0% change) would represent productivity gains in real terms—that is, in inflation-adjusted terms. In a few cases, agencies have recognized structural changes in their cost structure or service and are reporting productivity declines.

Last Reported: Data available as of October 2009.

Progress: An up arrow indicates that productivity is improving, a down arrow indicates that productivity is declining. An arrow to the right indicates that relatively little positive or negative change has occurred.

The tables are arranged by agency within each secretariat. The secretariats are organized under an appropriate high-level goal established by the Council. However, as noted in the table on Governor’s Key Measures, agency missions often impact several different high-level goals.

Agency Productivity Measures

ECONOMY						
Agriculture and Forestry Secretariat						
Agency	Productivity Measure	Base	Target	% Change	Last Reported	Progress
Department of Forestry	Cost per acre for harvest water quality inspections	\$10.88	\$10.34	-5%	\$11.75	↑
Department of Agriculture and Consumer Services	Cost per food inspection activity	\$176.83	\$176.83	0%	\$167.83	↑
Commerce and Trade Secretariat						
Agency	Productivity Measure	Base	Target	% Change	Last Reported	Progress
Board of Accountancy	Determination cost per violation	\$2,229	\$1,700	-24%	\$1,655	↑
Board of Accountancy	Cost per original CPA license processed and issued	\$8.95	\$8.50	-5%	\$6.05	↑
Department of Business Assistance	Cost per economic development project for the Jobs Investment Program	\$2,055	\$2,014	-2%	\$1,904	↑
Department of Mines, Minerals and Energy	Environmental protection cost per mineral extraction site	\$886.00	\$886.00	0%	\$776.00	↑
Department of Mines, Minerals and Energy	Worker safety program cost per mineral extraction worker	\$662.00	\$662.00	0%	\$668.00	➔
Department of Professional and Occupational Regulation	Cost per licensee	N/A	\$14.82	N/A	\$13.57	➔
Virginia Economic Development Partnership	Cost per job announced	\$796.00	\$863.00	+8.4%	\$731.00	↑
Virginia Racing Commission	Cost per permit issued or renewed	\$64.31	\$58.00	-10%	\$60.00	↑

EDUCATION

Education Secretariat

Agency	Productivity Measure	Base	Target	% Change	Last Reported	Progress
Department of Education	Staff costs per fully accredited Virginia public school	N/A	N/A	N/A	\$1,151	-
Eastern Virginia Medical School	Growth in patient care revenue per clinical faculty member	\$166.5K	\$187.4k	+3% / year	\$176K	↓

Office of Commonwealth Preparedness	Cost per annual agency preparedness assessment	\$104.00	\$75.00	-28%	\$60.00	▲

THE VIRGINIA REPORT

II. 2010 Enhancements

II. 2010 ENHANCEMENTS

INTRODUCTION

This chapter provides a brief introduction to the Council and the enhancements planned for four focus areas: roadmap and special issues, assessment, performance, and productivity improvement.

The Council on Virginia's Future—which is comprised of state, business, and community leaders from across the state—was established by the 2003 Session of the General Assembly to advise Virginia's leaders on the development and implementation of a roadmap for Virginia's future. The Council is committed to improving the quality of life in Virginia and helping to ensure that the state is effective in making Virginia an even better place in which to live, work, and raise a family.

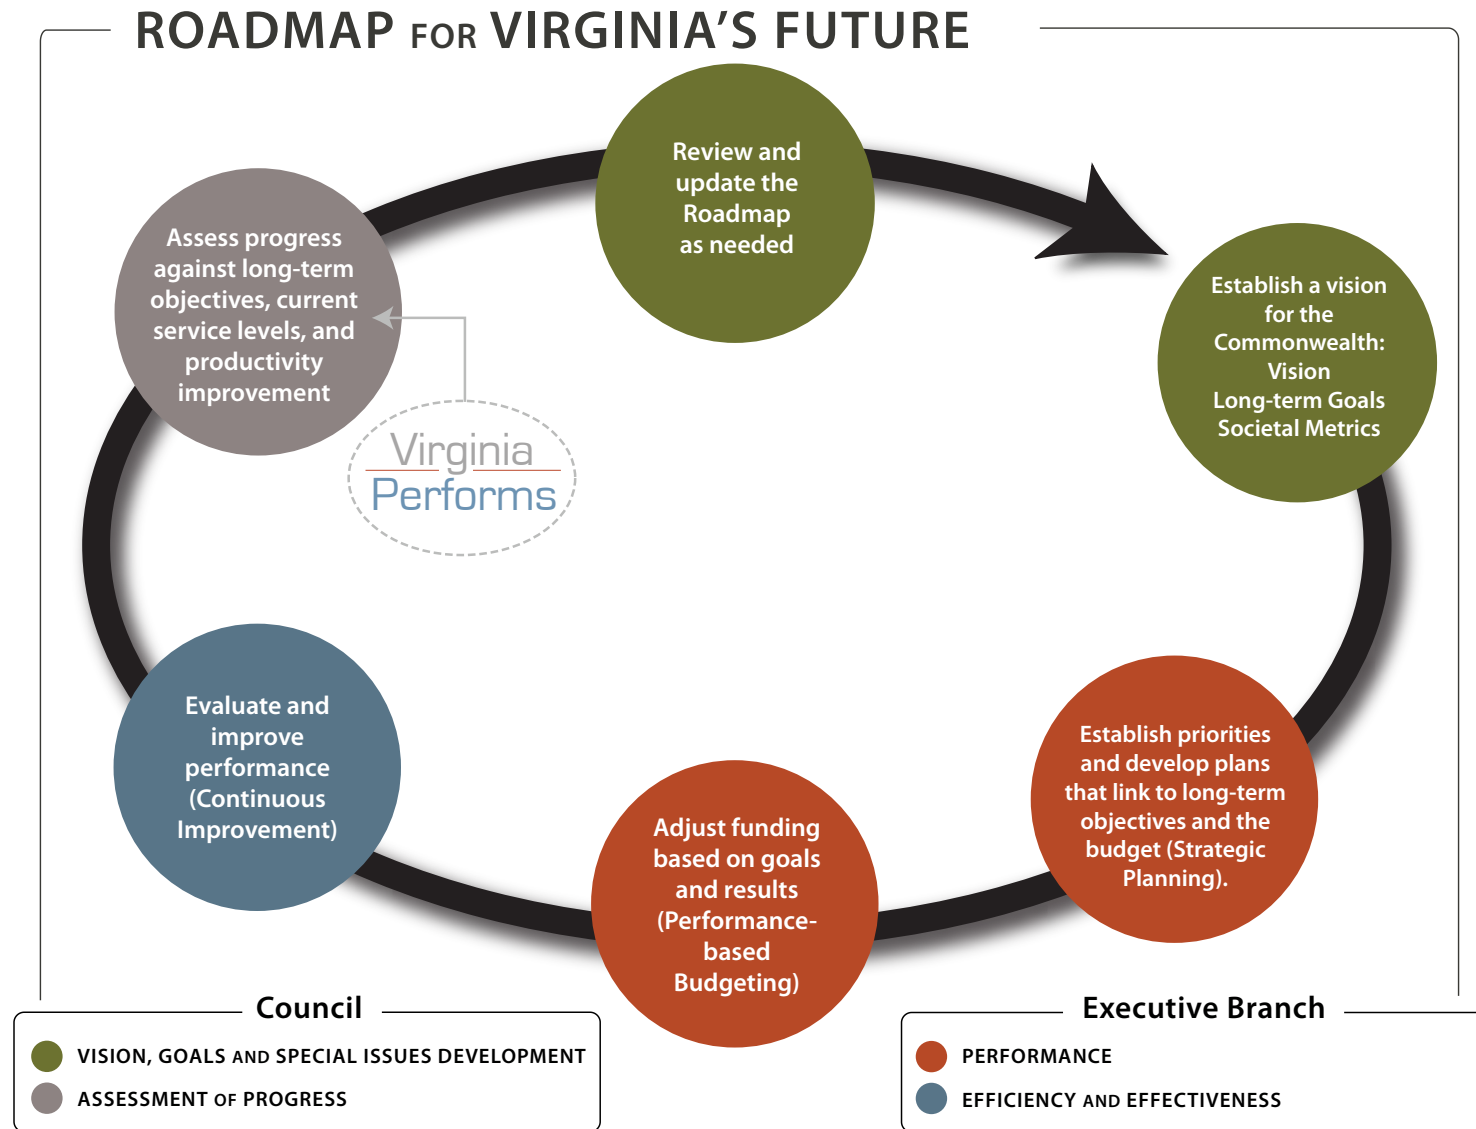

The Council works to create these improvements by:

- Providing a long-term focus on high-priority issues;
- Creating an environment for improved policy and budget decision-making;
- Increasing government performance, accountability and transparency; and
- Engaging citizens in dialogue about Virginia's future.

More information is available at <http://future.virginia.gov>.

The Council began its work in 2003 by designing the Roadmap for Virginia's Future (Figure 9), a model for improving performance leadership and accountability in state government.

FIGURE 9: Council Roadmap

The Council then began working with its partners to set long-term goals for the Commonwealth and to develop Virginia Performs, a performance leadership and accountability system, to help ensure that state government is both efficient and effective in improving outcomes and the quality of life for Virginians.

Virginia Performs establishes a vision-driven, disciplined approach for encouraging collaboration, facilitating change, setting policies, making decisions, and ensuring accountability for producing positive results for citizens. It starts with a shared vision for Virginia—one of responsible economic growth, an enviable quality of life, good government, and a well-educated citizenry prepared to lead successful lives and to be engaged in shaping the future of the Commonwealth. This vision, together with the high-level goals established by Council, serves as a compass to guide state government decisions and actions.

Workplan Highlights

The Council's enabling legislation (§ 2.2-2683 et seq. of the Code of Virginia) outlines three core components of the performance leadership and accountability system:

- Assessment:** Effective measurement and analysis of outcomes and productivity improvement.
- Performance:** Outcome-driven, performance-based planning and budgeting processes leading to improved outcomes for Virginians.
- Productivity Improvement:** Innovative methods for improving efficiency and effectiveness.

These elements—assessment, service performance, and productivity improvement—represent interrelated core components of the Council's scope of work. In addition, the Council's workplan includes an ongoing focus on long-term, high-priority issues—such as educational attainment—that are of critical importance to Virginia's long-term prosperity and quality of life.

Areas of Emphasis for 2009

Figure 10 on the following page summarizes the areas of emphasis established for 2009.

FIGURE 10: Areas of Emphasis Established for 2009

Council		Executive Branch	
Roadmap and Special Issues Development	Assessment	Performance	Productivity Improvement
<p>Purpose</p> <p>Refine the Roadmap for Virginia's Future.</p>	<p>Purpose</p> <p>Refine Virginia Performs.</p>	<p>Purpose</p> <p>Improve state government planning, budgeting, and performance management.</p>	<p>Purpose</p> <p>Enhance state government's productivity improvement and change management.</p>
<p>Continue an emphasis on educational attainment:</p> <ul style="list-style-type: none"> • Develop a data-driven approach to identify high-value opportunities to strengthen the student pipeline in Virginia. • With partners, develop options for improving Virginia's higher education attainment rates. • Convene forums on key educational attainment issues. 	<ul style="list-style-type: none"> • Continue to enhance and refine service, productivity, administrative, and other performance measures and data. • Enhance site functionality with improved reporting, mapping, and navigation features. • Launch regional versions of Virginia Performs, beginning with Hampton Roads. 	<p>Continue to enhance core planning and budgeting systems:</p> <ul style="list-style-type: none"> • Develop new agency executive progress reports to increase transparency and provide an integrated view of performance issues and opportunities for improvement. • Strengthen the links between outcomes and budget decision-making. • Continue development of the new performance-based planning & budgeting system. 	<ul style="list-style-type: none"> • Continue development of productivity improvement initiatives. • Develop a future state for the Productivity Investment Fund and establish an enterprise approach to continuous improvement.
