# REPORT

# Report to the House Appropriations and Senate Finance Committees of the Virginia General Assembly on Community-Based Sickle Cell Programs

June 29, 2012

### What is Sickle Cell Disease?

Sickle Cell Disease is a chronic anemia and inherited blood disorder where normal round shaped red blood cells change from their normal round shape to a "quarter-moon" or sickle-like shape. This disease is produced when the sickle cell gene is transmitted by both parents to a child. Sickled shaped cells cannot squeeze through small blood vessels so they often jam up, blocking the flow of blood and oxygen to body parts and causing extreme pain. A pain crisis can last for days or even weeks and may occur several times a year. Lack of oxygen flow can also damage muscles, bones and internal organs and lead to strokes and other serious medical problems.

Nationally, approximately 1 in 500 African American children is born with a serious sickle cell disorder, making it the most common long term illness identified in this population. However, in Virginia, approximately 1 in 325 African Americans suffer with Sickle Cell Disease and 1 in every 1100 to 1400 Hispanics, far higher than the national average. Up to 100,000 people in the USA suffer with Sickle Cell Disease of which around 4,000 are in Virginia. Over 2,000,000 people in the USA have Sickle Cell Trait and approximately 155,000 are in Virginia.

**DALLAS, Sept. 27, 2006 /PRNewswire**/ -- "Sickle Cell Disease is one of the most prevalent and costly genetic disorders in the U.S. Today, **one in every 4,000 Americans is born with a form of SCD and many experience chronic anemia, stroke, spleen and kidney dysfunction, pain crises, and susceptibility to bacterial infections. Moreover, the National Institutes of Health (NIH) estimates that almost one-third of adults with SCD develop pulmonary hypertension, a life-threatening condition resulting in a 10-fold greater risk of death.**"

"Due to this high disease burden, the Sickle Cell Disease Association of America (SCDAA) reports that Sickle Cell Disease in which abnormal hemoglobin causes red blood cells to become stiff, sickle- shaped and unable to flow easily through blood vessels -- <u>results in an estimated</u> 750,000 hospitalizations a year. The cost of these hospitalizations is estimated at \$475 million annually."

# **Background**

The Commissioner of Health has the responsibility for sickle cell screening and treatment under the Code of Virginia. Screening of all newborns for sickle cell disease began in Virginia during July of 1989. At the beginning of the program, centers for comprehensive follow-up care were not available. In 1994, Virginia began providing statewide comprehensive sickle cell services to decrease the morbidity and mortality among children.

The June 30, 2011 report to the House Appropriations and Senate Finance Committees of the Virginia General Assembly on Community-Based Sickle Cell Programs submitted by the Virginia Department of Health made the following statements. **"The provision of comprehensive care is a time-intensive endeavor that includes ongoing patient and family education, periodic comprehensive evaluations and other disease-specific health maintenance services, psychosocial care, genetic counseling, and transition services. However, research demonstrates that the medical management model alone cannot address the multiple social, psychological, and educational needs of individuals living with chronic illnesses such as sickle cell disease."** 

Community-based programs provide resources to support the development of coping strategies and support for families impacted by sickle cell disease by addressing unmet educational, social, and psychosocial needs. Statewide Sickle Cell Chapters of Virginia, Inc. (SSCCV), also known as Sickle Cell Chapters of Virginia or Statewide, a non-profit 501(c)(3) tax-exempt communitybased organization, has a network of eight (8) community-based sickle cell disease organizations (chapters) that provide a variety of services across the Commonwealth. The chapters are located in Danville, Fredericksburg, Hampton, Lynchburg, Norfolk, Richmond, Rocky Mount and South Boston. Most of the chapters in this network have operated since 1972. Statewide is working to develop chapters in the Charlottesville and Northern Virginia areas.

There are four comprehensive sickle cell centers under contract for services in the state. The centers are Children's Hospital of the King's Daughters in Norfolk, Virginia Commonwealth University Health System in Richmond, University of Virginia in Charlottesville and D. C. Children's Medical Center in <u>Washington, D.C.</u> which replaced INOVA Hospital in Fairfax, Virginia. It should be noted that only Virginia Commonwealth University Health System provides clinical care for adult clients.

It is estimated that the State of Virginia has about 4,000 sickle cell clients/patients. The centers care for around 1,100 to 1,200 of them. The centers provide care and services to patients of the centers, but generally, do not provide services to non-patients of their hospitals. That means that the centers are only serving around 30% of this population. This demonstrates the very need for a network of community-based programs to serve the 70% of clients who still need services.

Those of us involved in community programs define community-based sickle cell programs as ones that work to assist any client needing services who is in the care of a private physician or any client receiving services from sickle cell centers who needs or wants additional service.

# **General Assembly Background**

According to figures from the Virginia Department of Health, between 1995 and 2007 the number of sickle cell patients needing services increased by 136%. The 2007 General Assembly provided increased funding to \$450,000 a year for medical management services for individuals living with sickle cell disease and a yearly allocation of \$100,000 from general funds was approved for grants to community-based programs that provide education and family-centered support for individuals suffering from sickle cell disease. The purpose of the community-based allocation was to assist individuals and families living with sickle cell disease to develop the necessary skills and resources to improve their health status, family functioning, and self-sufficiency.

A <u>50%</u> state budget cut reduced the appropriation for this program to \$50,000 in FY09.

The Governor's Budget Plan reinstated \$90,000 funding for community-based sickle cell programs in FY 2010.

Nothing was said to the community programs when the funds were restored. The restored funds were re-allocated by the Virginia Department of Health to the Comprehensive Sickle Cell Centers.

Starting in FY09, annual appropriations were as follows:

- FY09 \$95,000
- FY10 \$81,000
- FY11 \$90,000
- FY12 \$90,000

Item 288Q of the 2010 Appropriation Act required the Virginia Department of Health (VDH) to develop criteria for distributing these funds, including specific goals and outcome measures and to submit an annual report detailing program outcomes to the House Appropriations and Senate Finance Committees of the Virginia General Assembly.

### **Community-Based Organizations Funding Status FY11**

The Virginia Department of Health issued a Request for Proposals (RFP) for community-based Sickle Cell Support Services on July 16, 2010. The RFP solicited non-clinical activities that provide assistance, education, and family-centered support for individuals with sickle cell disease. VDH issued three contracts to begin community-based services on October 1, 2010 in response to the RFP to the following organizations:

Fredericksburg Area Sickle Cell Association, Inc	Fredericksburg	\$25,000.00
Sickle Cell Association of Richmond – OSCAR	Richmond	\$30,000.00
Children's Hospital of the King's Daughters	Norfolk	\$35,000.00
Total		\$90,000.00

Item 288Q of the 2011 Appropriation Act required the Virginia Department of Health (VDH) to allocate its \$90,000 appropriation for community-based sickle cell programs to the Statewide

Sickle Cell Chapters of Virginia (SSCCV). This funding is to be used for grants to communitybased programs that provide patient assistance, education, and family-centered support for individuals suffering from sickle cell disease. Statewide (SSCCV) will develop criteria for distributing these funds including specific goals and outcome measures. Because of this change, the contracts with the three FY2011 vendors were terminated.

### **Community-Based Organizations Funding Status FY12**

Statewide Sickle Cell Chapters of Virginia issued a Proposal for community-based Sickle Cell Support Services in June, 2011. The proposal solicited non-clinical activities that provide assistance, education, and family-centered support for individuals with sickle cell disease. Statewide issued five contracts to begin community-based services on July 1, 2010 in response to the proposal to the following organizations:

Blue Ridge Area Sickle Cell Association (BRASCA)	Rocky Mount	\$ 5,000.00
Fredericksburg Area Sickle Cell Association (FASCA)	Fredericksburg	\$18,366.62
Sickle Cell Association of the Peninsula (SCAP)	Hampton	\$19,142.71
Sickle Cell Association of Richmond – OSCAR	Richmond	\$23,356.76
Sickle Cell Association (SCA)	Norfolk	<u>\$24,133.91</u>
Total		\$90,000.00

All five chapters receiving grant awards are required to conduct a "Survey of Needs" with as many of their registered clients as possible. This activity enables the chapters to determine who needs what services and how best the services can be delivered.

All chapters provide sickle cell education in the community through participation in health fairs or forums, church activities and various civic or health related events. Many of the communitybased program activities provide a focus on mental and social well-being. Stress-reducing activities have a positive effect on physical well-being. During the course of the grant year, chapters try to provide whatever services they have available. These services vary from chapter to chapter based in part on funds and man-power available. Some of the services include support group meetings, calls to check on clients, visitations, information or referral assistance, job training, assistance with obtaining disability benefits, employment and vocational rehabilitation.

### Community-Based Sickle Cell Program Activities as of March 31, 2012

The five aforementioned organizations were awarded funding to begin community-based services on July 1, 2011. The following information provides a summary of the community-based education and outreach activities performed as of March 31, 2012. Monthly activity and financial reports are submitted by each chapter to the Virginia Department of Health by the 15<sup>th</sup> of each month. Contracted chapters will continue to conduct activities until the end of the fiscal year (June 30, 2012). A majority of the activities provided focus on mental and social wellbeing. These stress-reducing activities have a positive effect on physical well-being of those who suffer with Sickle Cell Disease and their families.

# **Blue Ridge Area Sickle Cell Association**

The Rocky Mount chapter serves the cities of Martinsville, Roanoke, and Salem and the counties of Franklin, Henry and Roanoke.

Revised pamphlet for education	

### **<u>Narrative/Other Information:</u>**

The chapter provided programs for clients and families to explain services offered by Service Delivery Agencies such as social services, social security and disability resources, medical assistance, legal aid, etc. The chapter offered some computer training to clients/families. The support group set objectives and goals and have been very active by reaching out to other clients and families trying to build a closer relationship by calling, sending cards, helping the family during hospital stays, etc.

<u>Sickle Cell Association of the Peninsula</u> The Hampton chapter serves the cities of Hampton, Newport News, Poquoson, Williamsburg and Yorktown.

rumber of raracipants.	102

<u>Narrative/Other Information:</u> In partnership with Antioch Baptist Church AIM Center, a hot meal, groceries and clothing are offered every Wednesday. The chapter also participated in their tutorial program to help children that need extra help in school. This is also used as an opportunity to give out sickle cell literature and locate new clients.

The chapter used some of their funds to obtain a computer to help maintain records.

# Sickle Cell Association of Richmond-OSCAR

# Narrative/Other Information:

Sickle Cell Clients are referred to the Referrals by Psychosocial Intervention Program to help with developing their coping skills and the transition from pediatric care to adult care.

The chapter established a program partnership for Sickle Cell children and their families with Children's Hospital of the King's Daughters (CHKD) and continues to get referrals from CHKD on transitioning patients into adult care at Eastern Virginia Medical School (EVMS).

Assistance to clients (food, housing, utilities) is provided through community donations.

The Psychosocial Intervention Project was funded by Sentara Healthcare Foundation.
