Appalachian Power Company
Report on Municipal Net Energy Metering
PUR-2019-00182

Summary

This report will cover the status of the Appalachian Power Company's (the "Company") pilot program for municipal net energy metering ("Pilot Program") pursuant to § 56-585.1:8 of the Code of Virginia.

Municipal Net Energy Metering Program¹

The Pilot Program will allow a Municipal Customer-Generator in the Company's Virginia service territory that generates electricity from a renewable fuel generator owned and operated by a single municipality, which is located on such Municipal Customer-Generator's premises, in an amount that exceeds the electricity consumed by such Municipal Customer Generator to have the Company credit one or more Metered Account(s) of Target Account(s). The Municipal Customer-Generator shall direct the Company to provide compensation for the Municipal Customer-Generator's Excess Generation on an annual basis. The Municipal Customer-Generator may direct the Company to apportion the Municipal Customer Generator's Excess Generation to the Metered Account(s) of Target Account(s) in the same Municipality (and in the case of a Target School within the public school division of the same Municipality), such that the generation energy charges on the electric bills of such Metered Account(s) of the Target Account(s) would be reduced by the amount of the Excess Generation kilowatt-hours ("kWh") apportioned to the Metered Account(s). The amount of generating capacity of the Municipal Customer-Generators shall not exceed an aggregate of five megawatts ("MW") The initial term of the Pilot Program shall be for six (6) years.

Reports to the General Assembly

The Company shall submit a report to the General Assembly and contemporaneously provide a copy to the Commission by December 1 of each year the Pilot Program is in effect, commencing in 2020, regarding the status of the Pilot Program's enrollment and any other information the Company deems appropriate. At a minimum, the report must include (i) number of Municipal Customer-Generators enrolled; (ii) amount of Excess Generation; (iii) number of Metered Account(s) and Target Account(s); (iv) aggregate amount of bill credits by customer; (v) number and type of Municipal Customer-Generator(s); and (vi) administrative costs in aggregate on average by customer. As of the date of this report, the Company does not have any customers participating in the Municipal Net Metering Program. However, "Exhibit A" will be the format the Company intends to use for future reports.

¹ Certain terms are described in the Guidelines For Municipal Excess Renewable Generation Pilot Program in Case No. PUR-2019-000182.
