Annual Report on Information and Communications Technology Accessibility Compliance Submitted to the Virginia General Assembly

Southwest Virginia Higher Education Center
Fiscal Year 2026

In accordance with § 2.2-3504 of the Code of Virginia, and pursuant to applicable reporting requirements regarding information and communications technology (ICT) that does not conform to digital accessibility standards and is not otherwise covered by the exceptions set forth in 28 C.F.R. § 35.201 or 36 C.F.R. Part 1194, Appendix A, § E202, the Southwest Virginia Higher Education Center (the Center) hereby submits the following report.

Following a review of the Center's information and communications technology resources, the Center is not aware of any ICT systems, services, software, websites, or digital content under its control that fail to conform to applicable federal and state accessibility requirements and that are not otherwise subject to a recognized exception under law or regulation.

As no known instances of nonconforming technology have been identified, the Center is unable to estimate any costs associated with remediation of such technology. Based on the Center's current assessment, there would be no anticipated fiscal impact related to bringing noncompliant ICT into compliance with applicable accessibility requirements because no such technology has been identified. However, the Center recognizes that ongoing efforts to maintain and enhance the accessibility of its digital resources, including its public website, may result in future expenditures associated with accessibility reviews, website modifications, content remediation, and related compliance activities.

The Center remains committed to ensuring equal access to its programs, services, and information resources for all individuals, including persons with disabilities. As part of this commitment, the Center has continued efforts to improve the accessibility of its public website. These efforts have included reviewing website content and functionality, implementing accessibility enhancements where appropriate, and incorporating accessibility considerations into website maintenance and development activities. The Center will continue working to ensure its public-facing digital resources align with applicable accessibility standards and recognized best practices.

The Center also incorporates accessibility considerations into its ongoing technology management, procurement, and website development processes and will continue to monitor its digital environment to support compliance with federal and state accessibility requirements.

Respectfully submitted,

Southwest Virginia Higher Education Center
